

10 AMPERE CHARGER

This is a highly efficient 3 stage charger for use with lead acid batteries. The three modes (constant current, timed constant voltage, continuous 'float') optimise the charging process and permit the charger to be left connected indefinitely. A three colour LED shows charge status. The device has a low leakage current allowing the unit to be left connected without mains input. Furthermore the unit is reverse-polarity and short circuit protected. The high current rating ensures that the supplied equipment is available for the maximum amount of time.

SPECIFICATION

Input	110 to 240Vac 47 - 63Hz
Indicator	Multicoloured LED
Bulk charge	Orange 10A
Balancing	Yellow 14.7V
Float (Ready/Stand-by)	Green 13.7V
Operating Temperature	-10°C to +40°C
Height	54mm
Width	171mm
Depth	184mm
Weight	1.7kg
