

## REMOTE BANK CONTROLLER TYPE 579

The Remote Bank Controller Type 579 is a radio linked handset that is used for remote control of all pop-up and moving targetry from the firing point.

All pop-up targets and moving targets are under the control of the Central Range Controller. The Remote Bank Controller sends signals to the Central Range Controller which then sends appropriate commands on to the targets.

Thus a single operator at the firing point can Start, Stop or Pause a sequence or simply raise or lower a bank of targets at a single distance

The unit is lightweight and powered from an internal rechargeable battery.

The transmitter range is up to 1Km line of sight and operates in the UHF frequency band.
