

## RANGE PROCESSOR TYPE 663

The Range Processor Type 663 is a high performance computer, which features the Windows XP Pro operating system and hardware and software compatibility with the IBM PC computer.

The 663 uses the latest Dual Core technology and comes with ample memory and hard disk space for all modern Windows applications. Additional hardware is provided to make full use of the multimedia features of Windows XP and to interface with the MS Instruments PLC equipment.

The unit can be supplied with one or two monitors where the first monitor is used for control of the system while the second monitor displays an overview of the range and all results as they are received.
